### **DETAILED ACTION**

This office is in response to remarks and amendments filed June 16, 2010. Claims 105, 107, 109-115, 117, 118 127-130, 133-156, 159, 162-166, 168, 169, 171, 172, 174, 175, 177, 178, 180, 181, 183, 184, 186-193 are pending.

#### ***Drawings***

The drawings submitted on August 25, 2003 are acceptable.

#### ***Response to Arguments***

1: Applicant's arguments filed on June 16, 2010 have been fully considered. Applicant submitted amendments and previous rejection has been withdrawn.

2: The Terminal Disclaimer submitted on September 21, 2007 has been approved and made of record.

#### ***Allowable Subject Matter***

Claims 105, 107, 109-115, 117, 118 127-130, 133-156, 159, 162-166, 168, 169, 171, 172, 174, 175, 177, 178, 180, 181, 183, 184, 186-193 are allowed over prior arts.

The above mentioned claims are allowable over prior arts because the CPA (Cited Prior Art) of record fails to teach or render obvious the claimed limitations in combination with the specific added limitations, as recited in independent claims and subsequent dependent claims.

The following is an examiner's statement of reasons for allowance:

Art Unit: 2431

The present invention is directed to a malicious code detection method that involves associating weights to analyzed codes using detection routines. The executable codes under investigation are analyzed by the detection routines, which associates weights into the codes in response to detection. The executed code is determined as a valid program or malicious code based on the associated weight.

Thus, the cited prior art does not explicitly teach or suggest computer-implemented method comprising:

- selecting an active program on a computer system as code under investigation, wherein the program is running on an operating system of the computer system; and
- executing each of a first and a second plurality of detection routines on the operating system of the computer system, wherein the first plurality of detection routines are executable to determine whether the selected code under investigation has characteristics and behaviors usually associated with a valid program, wherein the second plurality of detection routines are executable to determine whether the selected code under investigation has characteristics and behaviors usually associated with a malicious program, and wherein said executing includes:
  - applying each of the first plurality of detection routines to the code under investigation to obtain a corresponding one of a first plurality of results; and
  - weighting each of the first plurality of results to obtain a first score indicative of whether the code under investigation is valid code;
  - applying each of the second plurality of detection routines to the code under investigation to obtain a corresponding one of a second plurality of results;

Art Unit: 2431

weighting each of the second plurality of results to obtain a second score indicative of whether the code under investigation is malicious code; and upon completing the executing of the first and second plurality of detection routines, using at least one of the first and second scores to categorize the code under investigation with respect to the likelihood of the code under investigation compromising the security of the computer system.

The examiner has found that the prior art of record does not appear to teach or suggest or render obvious the claimed limitations in combination with the specific added limitations as recited in independent claims and subsequent dependent claims. The prior art of record fails to teach or suggest a system and method as mentioned above.

An updated search did not reveal any prior art that would anticipate or make obvious the currently claimed invention.

1. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
